Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, 9-12, 17-28, 31-35 and 37, drawn to a nucleic acid encoding SEQ ID NO:2, 4, 6, 8, 12, 16, 18, 20, 22, 24, 30, 32, 34, 40, 42, 44 or 46, an expression cassette comprising the nucleic acid, a plant transformed with a construct comprising a nucleic acid, and a method of impacting a plant pest, classified in class 536, subclass 23.71.
 - II. Claims 4-8 and 29-30, drawn to a protein of SEQ ID NO:2, 4, 6, 8, 12, 16, 18, 20, 22, 24, 30, 32, 34, 40, 42, 44 or 46, and a method of using it to impact an insect pest, classified in class 530, subclass 350.
 - III. Claims 13-16 and 36, drawn to a microorganism transformed with a nucleic acid and a method of using it to impact a pest, classified in class 435, subclass 252.3.

The claims will be examined to the extent they read on the elected invention.

2. The inventions are distinct, each from the other because:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions have different modes of operation and different functions. DNA and protein differ in composition, structure and function.

Inventions I and III are unrelated. The methods have different starting materials, different method steps and different end products.

Inventions II and III are unrelated. The methods have different starting materials, different method steps and different end products.

3. Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq (see MPEP 803.04 and 2434).

Upon election of a Group, Applicant is additionally required to select a single nucleotide sequence or amino acid sequence, as appropriate, for said Group. This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fields of search, and classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1638

application. Any amendment of inventorship must be accompanied by a petition under 37

CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
